PROFESSIONAL SUMMARY

Software engineer with startup experience at Rush Luxe, combining full-stack development, AI-assisted engineering, and IT infrastructure support. Builds APIs, data pipelines, and automation workflows using TypeScript/JavaScript, Python, React, PostgreSQL, Redis, AWS, and CI/CD.

TECHNICAL SKILLS

Languages and Web TypeScript, JavaScript (ES6+), Python, SQL, HTML, CSS, React, React Native
Backend and APIs Node.js, Express.js, NestJS, Django, FastAPI, REST APIs, webhooks, OAuth/JWT
Data and Messaging PostgreSQL, Redis, MongoDB, SQS, ingestion, normalization, caching, idempotency
Cloud and Delivery AWS ECS/Fargate, Lambda, S3, RDS, VPC, WAF, CloudWatch, Docker, Terraform, GitHub Actions, OIDC, Linux
Quality and Reliability Jest, Pytest, automated testing, structured logging, metrics, tracing concepts, failure-mode analysis, code review, CI/CD
AI and Automation ChatGPT, Claude, n8n, retrieval-augmented generation (RAG), context handoffs, AI-assisted debugging and code review

ENGINEERING EXPERIENCE

Rush Luxe
Jul 2026 - Present

Full Stack Developer | Early-stage startup; Remote

- Contribute to full-stack application development, with work across backend APIs, data models, and application integration.
- Use ChatGPT and Claude to break down requirements, investigate failures, and review code and test results. Maintain context checkpoints and implementation handoffs across development sessions.

OS Labs
Apr 2026 - Present

Software Engineer, Developer Caching Utility | Remote

- Developed a TypeScript/Node.js caching utility with per-key mutex locking, TTL-aware reads, probabilistic refresh, UUID request tagging, and safe fallback behavior to reduce thundering-herd risk and stale responses.
- Added automated tests, structured logging, and benchmark paths to evaluate hit/miss behavior, lock contention, latency, memory use, and cache/origin failure modes.
- Collaborate through Git, code review, technical documentation, and architecture discussions focused on maintainability, concurrency, and integration ergonomics.

Wayfair
Aug 2026 - Present

AI Extern | Remote

- Built n8n workflows that ingested competitor and trend signals, normalized outputs, and produced structured summaries for a live Google Sheets decision dashboard.
- Created repeatable field mappings and traceable outputs so nontechnical users could compare pricing, launches, campaigns, and changing demand patterns.

PROFESSIONAL DEVELOPMENT

AI for Nonprofits Sprint
Jun 2026 - Sep 2026

Participant in professional development on practical AI literacy, responsible use, organizational adoption, and peer learning in the nonprofit sector.

SELECTED ENGINEERING PROJECTS

Payment Dispute and Chargeback Platform

TypeScript, NestJS, PostgreSQL, Redis, AWS Lambda, ECS, SQS, S3

Built idempotent webhook ingestion, queue workers, evidence storage, status APIs, retry logic, checkpoints, and structured tracing across asynchronous flows.

Cloud-Native Deployment Platform

Terraform, Docker, GitHub Actions/OIDC, ECS/Fargate, VPC, RDS, Redis, WAF, CloudWatch

Built repeatable infrastructure and deployment workflows with health checks, centralized logs, environment separation, and rollback-aware releases.

Pocket Politics

React Native, Node.js/Express, PostgreSQL

Built adapters to ingest, validate, normalize, and deduplicate civic datasets, retaining source and freshness metadata and serving canonical data through paginated REST endpoints.

Golden Quill

OpenAI API, Pinecone, retrieval-augmented generation

Built retrieval and grounding workflows with structured logging and evaluation signals to debug retrieval quality and model failures.

Python Data Ingestion Pipeline

Python, PostgreSQL

Implemented idempotent ingestion, validation, checkpoints, and restart-safe processing for repeatable data workflows.

Observability Platform

OpenTelemetry concepts; Prometheus, Loki, Tempo, and Grafana architecture

Designed decoupled telemetry-provider interfaces, incident history, notification adapters, and investigation workflows with production readiness in mind.

SYSTEMS AND INFRASTRUCTURE EXPERIENCE

Boltacity - Rag & Bone Retail Project

May 2025 - Jun 2025

IT Infrastructure Technician | Manhasset, NY

- Relocated and validated POS, Windows endpoints, networking, VoIP, cameras, payment devices, and A/V infrastructure; completed migration two days early with zero operational downtime.
- Used Linux command-line diagnostics and structured validation to isolate connectivity and endpoint failures across a live business environment.

NYC Department of Education - P.S. 241

Apr 2015 - Jun 2023

Technology Single Point of Contact (SPOC) | New York, NY

- Troubleshot hardware, software, network, authentication, and device issues; coordinated escalations, documented fixes, and supported end users in a large education environment.
- Built a foundation in incident ownership, user-centered troubleshooting, systems reliability, and operational documentation.

EDUCATION AND CREDENTIALS

CUNY John Jay College of Criminal Justice | B.S., Criminal Justice, Expected Jan 2027
Thomas Edison State University | M.S., Data Science and Analytics, in progress
Codesmith by OS Labs | Advanced Software Engineering Residency, 2025-2026
PC AGE | Internetwork Engineering Certificate, 2025
Certifications CompTIA Security+, Network+, A+
Languages English and Spanish
